

Vema Combi Range

**Vema Combi Range is a multi-purpose
Vehicle for fire and rescue services.**

Supplier for international
rescue and industrial customers

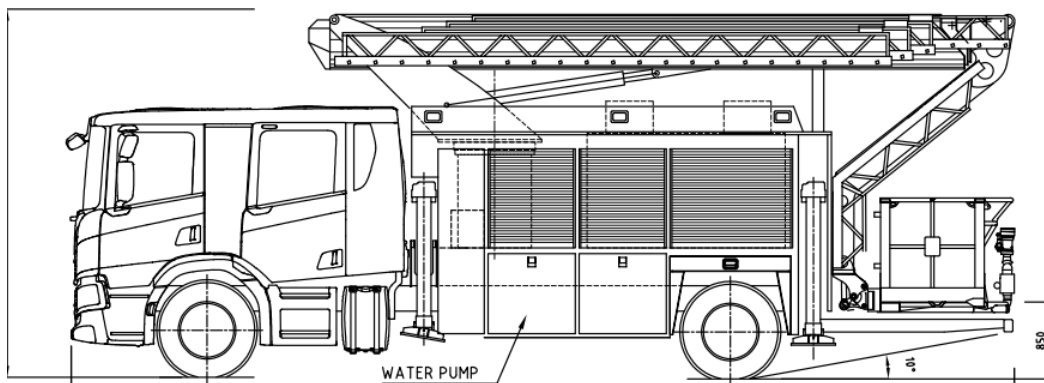

VEMA Combi range is designed for combination vehicles where traditional Fire Pumper and Aerial Ladder Platform are connected as one vehicle

Combi all-in-one concept makes it an ideal product for smaller cities and older suburbs where narrow streets do not allow manoeuvring of a big vehicle and where lower rise building do not require for high a high-rise Aerial Ladder Platform

For fire-fighting operations these models can be equipped with a water pump and a remote-controlled water monitor in the platform, as well as foam & water tanks & foam proportioning systems.

VEMA Combi Range Aerials are mounted onto a commercial standard truck chassis with adequate GVW and wheel bases.

VEMA Combi Range Aerials are engineered in compliance with all related European CEN Safety Requirements, Norms and Standards.
